

# HOT & COLD Planets

*Mercury is closest to the Sun. Why is Venus worth the most points?*

*Only four of the nine planets are shown - the four that are closest to the Sun. Can you name the missing five planets?*

## *How to Play*

Take turns rolling the special die to land on the planets or Moon.

The hottest or warmest planets are worth the most points.

List your points as you get them.

The game ends when both you and your partner have visited each of the planets and the Moon. You may visit a planet more than once.

The winner is the one who has the most points (is the hottest!).
